

Small Track Area Battery Operated Racing Cars

The same shape and features as their bigger brother, the Torro F1 Racing Car track vehicle, but with a single wheel at the front to enable them to travel on a smaller track due to a narrower turning circle required, (minimum of 4m wide required). The single front wheel is concealed underneath and they have ordinary, non steering wheels either side at the front to retain realism and balance. These coin operated racing car track rides are a MUST for any leisure related venue, they are AMAZING.

We can even supply & fit the track too!
